

Class diagram
atlas.py

Transfer describes the transfer between camera, arucos and other arucos.

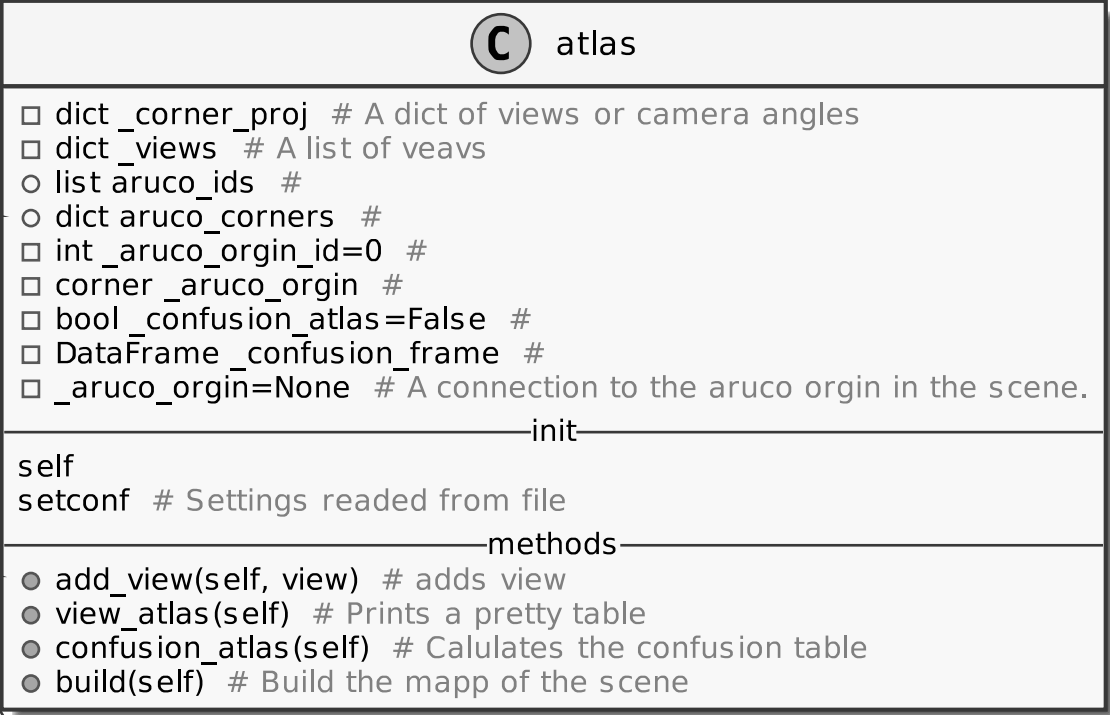

The corner object represents one aruco corner.

The atlas object calculate the relations between view and aruco corners

ToDo: Remove

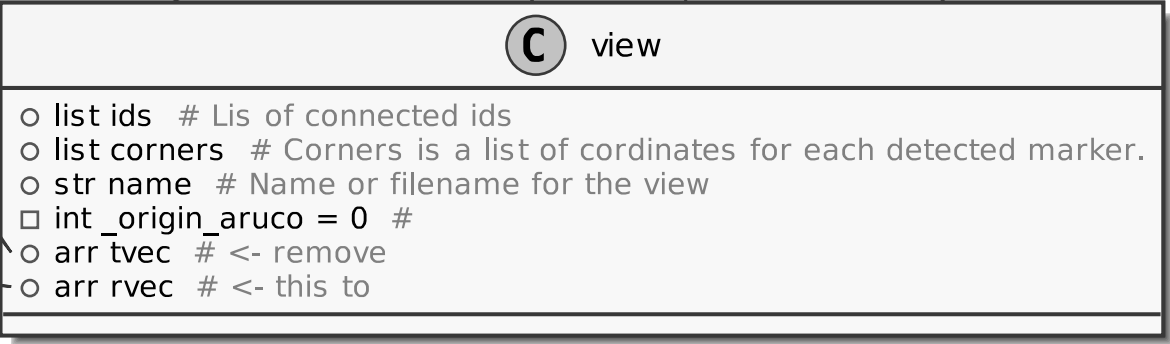

The view object contains one view of many.

As argument

Link

This is wrong..
Or perhaps not view could be the transfer object..
no! Its wrong, corner do not contain tvec, rvec

This to it should be in transfer
